

REMARKS

Claim 15 is canceled by way of this amendment, and, after entry of the amendment, claims 9, 12-13, and 16-19 will remain in this application. Reconsideration of the application is requested.

The objection to the drawings set forth in sections 3-4 on pages 2-3 of the Office Action is moot as a result of the cancellation of claim 15.

Independent claim 9 and independent claim 17 are again rejected under 35 U.S.C. § 102(b) or 35 U.S.C. § 103(a), along with all other claims remaining in the application, based on the Cantin et al. document. Reconsideration is requested.

It is well established that, in interpreting claim language, terms are given the broadest reasonable interpretation in their ordinary usage in context as they would be understood by one of ordinary skill in the art, in light of the written description in the specification, unless another meaning is intended and established therein, and without reading into the claim any disclosed limitation or particular embodiment (In re Am. Acad. of Sci. Tech. Ctr., 367 F.3d 1359, 1364 (Fed. Cir. 2004); In re Hyatt, 211 F.3d 1367, 1372 (Fed. Cir. 2000); In re Morris, 127 F.3d 1048, 1054-55 (Fed. Cir. 1997); In re Zletz, 893 F.2d 319, 321-22 (Fed. Cir. 1989)).

There is nothing in the specification of this application to indicate or establish any meaning of the terms "piston," "cylinder," and "opening provided in a cylinder wall" other than their meanings in ordinary usage. The Examiner's attention is directed to pages 320 and 896 of Webster's Ninth New Collegiate Dictionary (copies appended hereto), which include definitions of the term

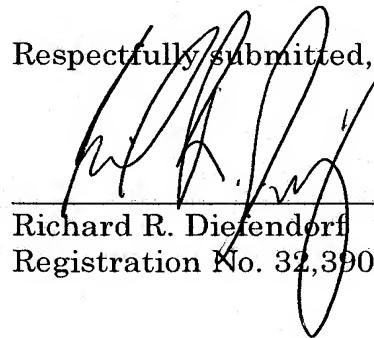

"cylinder" and its variations, and the term "piston" and its variations. While the comments provided by the Examiner in sections 19-20 on page 10 of the Office Action are noted, it is simply incorrect to assert that, under a reasonably broad interpretation, one may consider the movable frame 20 and the fixed frame 14 of the Cantin et al. anchorage to be a piston and cylinder, and the gap between parallel vertical plates 15, 16 of the Cantin et al. arrangement to be an "opening provided in a cylinder wall." The interpretation proposed is *unreasonably* broad, and therefore inappropriate.

As noted previously, the Cantin et al. movable frame 20 has been improperly characterized by the Examiner as a "piston," the Cantin et al. fixed frame 14 has been improperly characterized by the Examiner as a "cylinder," and the gap between parallel vertical plates 15, 16 of the Cantin et al. arrangement has been improperly characterized by the Examiner as an "opening provided in a cylinder wall." These features, which are required by both claim 9 and claim 17 above, are not found in the Cantin et al. arrangement. Again, moreover, nothing noted by the Examiner suggests modifying the Cantin et al. arrangement so as to include these features, and it is submitted that claims 9 and 17 in their present forms are patentable. All other claims remaining in this application are dependent claims and are patentable as well.

If there are any questions regarding this amendment or the application in general, a telephone call to the undersigned would be appreciated since this should expedite the prosecution of the application for all concerned.

If necessary to effect a timely response, this paper should be considered as a petition for an extension of time sufficient to effect a timely response. Please charge any deficiency in fees or credit any overpayments to Deposit Account No. 05-1323 (Docket #095309.58147US).
